INT. J. CONTROL, 1994, VOL. 60, NO. 6, 1403–1406

SUBJECT INDEX (Vol. 60)

AR-systems and controllability, algebraic aspects, 715
Adaptive generalized direct predictive control algorithm for MIMO systems, 1371
Adaptive model-based control using neural networks, 1163
Algebraic aspects of controllability for AR-systems, 715
Algorithm
  closed-form, for fault detection filter, 767
  for direct adaptive generalized predictive control of MIMO system, 1371
  multidimensional, for the realization of parametric uncertainty modelling and multi-parameter margin problems, 789
  recursive, for computing the matrix partial fraction expansion of transfer matrices having multiple quadratic poles, 1393
  suboptimal reduction type, for linear systems with a time delay, 181
  interpolation type class for bounded real functions, 331
  speed control, adaptive, for diesel-driven power plants, implementation on a digital signal processor, 467
Anaesthesia, multivariable, generalized predictive control with long-range predictive identification, 885
Anti-windup design for internal model control, 1015
Antiwindup method, simple, 1025
Automatic tuning of phase-lead and phase-lag compensators, 631
Auto-tuner for Smith dead time compensator, 117
Autotuning method with specifications on dominant pole placement, 265

Back-propagation neural-network based fuzzy controller with a self-learning teacher, 17
Binary rate modulation, its application and stability in control systems, 987
Bioreactor model, nonlinear, control using exact and I/O linearization, 499
Bounds, mixed-μ type, extensions to monotonic and odd monotonic nonlinearities using absolute stability theory, 905

Compensator, Smith dead-time type, auto-tuner, 117
Compensator design of semi-linear parabolic systems, 243
Compensators, phase-lead and phase-lag types, automatic tuning, 631
Concurrency and maximally permissive feedback in Petri nets with external input places, 617
Continuous linear systems with internal and external point delays, discretization and FIR filtering, 1223
Continuous nonlinear systems, class, sampled-data adaptive control, 569
Continuous time nonlinear system identification using delayed state variable filters, 159
Control
  GH_∞ self-tuning type, for multivariable systems, 347
  H_∞ type with state feedback for time-varying discrete systems, 451
  adaptive, model-following, discrete-time, for multivariable non-minimum-phase systems, 283
  covariance type, alternating convex projection design methods, 1083
  direct adaptive generalized predictive algorithm, for MIMO systems, 1371
  feedback linearizing and sliding mode type, of variable reluctance motor, 543
  internal model type, anti-windup design, 1015
  model reference type, of systems via implicit function emulation, 91
  model-based, adaptive, using neural networks, 1163
  nonlinear
    design for tip position tracking of a flexible manipulator arm, 1065
    of constrained linear systems, 1035
  of idle speed, QFT-type design methodology for parallel plant structure, 653
  of nonlinear plants, using Walsh functions, 1121
  of speed, adaptive algorithms, for diesel-driven power plants, implementation on digital signal processor, 467
  of vehicle speed, matching principle illustration with inputs restricted in magnitude and rate of change, 395
  predictive, generalized, with long-range predictive identification, for multivariable anaesthesia, 885
  sampled-data adaptive type, of class of continuous nonlinear systems, 569
Control systems, binary rate modulation, application and stability, 987
Controllability of AR-systems, algebraic aspects, 715
Controller
  L_2-type, synthesis with L_∞-bounded closed-loop impulse response, 1295
  dead-beat, optimum, design for SISO systems using time-weighted performance indices, 641
  design, reduced-order, adaptive, of load-frequency, for interconnected hydrothermal power-system, 1051
  discretization, rational basis for pole–zero map, 145

fuzzy, back-propagation neural-network based, with self-learning teacher, 17
hybrid neural-network-based self-organizing type, 117
non-parametric, synthesis for NMP plants, 847
predictive PI type, 953
self-tuning, Dahlin minimum variance, 747
Controller structures synthesis for robust load performance, 1353
Controllers
fast, self-learning, multivariable, fuzzy, constructed from a modified CPN network, 369
linear decoupling type, for constrained dynamic systems, 607
P and PI type, for unstable first-order plus time delay systems, design, 137
robust multirate servomechanism type, for linear delay systems using hybrid structure, 1265
Cost regulator, guaranteed, gain and phase margins, 1
Covariance bounds for discrete-time linear systems with time-varying parameter uncertainty, 1307
Curve fitting, in frequency domain, maximum amplitude criterion and guaranteed stability, 809

Dahlin minimum variance self-tuning controller, 747
Damped structural systems, time-delayed control, 687
Design
alternating convex projection methods for covariance control, 1083
anti-windup type, for internal model control, 1015
flexible manipulator arm tip position tracking nonlinear control, 1065
individual channel design structure of systems defined by state-space models, 71
matching principle illustration with inputs restricted in magnitude and rate of change, vehicle speed control, 395
of P and PI controllers for unstable first-order plus time delay systems, 137
of compensator for semi-linear parabolic systems, 243
of optimum dead-beat controller for SISO systems using time-weighted performance indices, 641
QFT-type methodology for parallel plant structure, application in idle speed control, 653
reduced-order adaptive load-frequency controller for interconnected hydrothermal power system, 1051
Discrete systems
stability robustness bound estimates, analysis and comparison, 297
time-varying, H_∞-control with state feedback, 451
Discrete-time linear systems with time-varying parameter uncertainty, covariance bounds, 1307
Discrete-time model following adaptive control for multivariable non-minimum-phase systems, 283
Discrete-time nonlinear systems, dynamic input–output linearization, 1319
Discrete-time systems, linear, time-variant, state models, 1247
Discretization and FIR filtering of continuous linear systems with internal and external point delays, 1223
Distributed system inversion for open-loop trajectory following, 671
Disturbance suppression in exact model matching, 425
Dynamic input–output linearization of discrete-time nonlinear systems, 1319
Dynamic systems, constrained, linear decoupling controllers, 607

Factorizations, coprime normalized, and balancing, for unstable nonlinear systems, 1193
Fault detection and isolation observers, 827
Fault detection filter, closed-form algorithm, 767
Fault-detection filter, optimal, new interpretation, 1339
Feedback linearizing and sliding mode control of a variable reluctance motor, 543
Filtering, FIR type, and discretization of continuous linear systems with internal and external point delays, 1223
Filtering and smoothing problems solution for uncertain-stochastic linear dynamic systems, 413
Filters, delayed state variable type, used for continuous time nonlinear system identification, 159
Frequency domain curve fitting with maximum amplitude criterion and guaranteed stability, 809
Functions, bounded, real, class of interpolation algorithms, 331
Fuzzy controller, back-propagation neural-network based, with self-learning teacher, 17
Fuzzy multivariable self-learning fast controllers constructed from a modified CPN network, 369

GH_∞ self-tuning control for multivariable systems, 347
Gain and phase margins of the guaranteed cost regulator, 1

H_∞-control with state feedback for time-varying discrete systems, 451
H_∞-optimal control problem, generalized, recasting as one-block Nehari problem, 153
H_∞-optimization problem class, closed-form solutions, 41

Identification
of continuous time nonlinear systems using delayed state variable filters, 159
off-line, of nonlinear plants using Walsh functions, 1121
Implicit function emulation of nonlinear system, model reference control, 91

Individual channel design structure of systems defined by state-space models, 71

L_2 controller synthesis with L_∞-bounded closed-loop impulse response, 1295
Lie algebras and the stability of nonlinear systems, 315
Linear single-input systems, optimal simultaneous stabilization via linear state feedback control, 483
Linear systems
  constrained, nonlinear control, 1035
  discrete-time, with time-varying parameter uncertainty covariance bounds, 1307
Linearization, dynamic input–output type, of discrete-time nonlinear systems, 1319
Luenberger-like observer for nonlinear systems, 1401

Manipulator arm, flexible, tip position tracking, nonlinear control design, 1065
Matching principle illustration with inputs restricted in magnitude and rate of change, vehicle speed control, 395
Maxwell's treatment of Siemens's hydraulic governor, 861
Mechanical system, constrained, stability analysis of equilibrium, 733
Model
  matching, exact, with disturbance suppression, 425
  of bioreactor, nonlinear control using exact and I/O linearization, 499
  reduction, suboptimal, for linear systems with a time delay, 181
Model-based adaptive control using neural networks, 1163
Model reference control of nonlinear systems via implicit function emulation, 91
Modelling, of parametric uncertainty and multiparameter margin problems, multidimensional realization algorithm, 789
Models
  nonlinear, validation using correlation tests, 1107
  state-space type, linear, with structured time-varying uncertainties, stability robustness, 435
  state-type, of linear time-variant discrete-time systems, 1247
Motor, variable reluctance type, feedback linearizing and sliding mode control, 543
Multidimensional realization algorithm for parametric uncertainty modelling and multiparameter margin problems, 789
Multirate robust servomechanism controllers for linear delay systems using hybrid structure, 1265
Multivariable non-minimum-phase systems, discrete-time model following adaptive control, 283
Multivariable systems
  GH_∞ self-tuning control, 347
  stability margin–phase margin relationship, 1283

Neural networks, use for adaptive model-based control, 1163
Neural-network based fuzzy controller, back propagation type, with self-learning teacher, 17
Neural-network-based self-organizing controller, hybrid, 197
Nonlinear control
  of a bioreactor model using exact and I/O linearization, 499
  of constrained linear systems, 1035
Nonlinear control system, state observation by on-line minimization, 595
Nonlinear model validation using correlation tests, 1107
Nonlinear system
  model reference control via implicit function emulation, 91
  stability, Lie algebras, 315
Nonlinear systems, Luenberger-like observer, 1401
Nonlinear unstable systems, normalized coprime factorizations and balancing, 1193
Non-minimum phase plants, non-parametric controller synthesis, 847

Observer, Luenberger-like, for nonlinear systems, 1401
Optimal fault-detection filter, new interpretation, 1339
Optimal linear regulator, 1005
Optimal simultaneous stabilization of linear single-input systems via linear state feedback control, 483
Optimization, H_∞ type problem class, closed-form solutions, 41
Optimization problem, continuous-time LQ type polynomial equation, 977
Optimum dead-beat controller design for SISO systems using time-weighted performance indices, 641
Order reduction in robust stabilization problems, 223

Parabolic system, semi-linear, compensator design, 243
Parallel plant structure, QFT-type design methodology, application in idle speed control, 653
Petri nets with external input places, concurrency and maximally permissive feedback, 617
Phase margin–stability margin relationship for multivariable systems, 1283
Pole, dominant, placement specifications in autotuning method, 265
Pole mobility and minimal norm stabilization of SISO systems under bounded state feedback, 1137
Pole–zero map in controller discretization, rational basis, 145
Polynomial equations for the continuous-time LQ optimization problem, 977
Power plant, diesel-driven, adaptive speed control algorithm implementation on a digital signal processor, 467

Power system, hydrothermal, interconnected, reduced-order adaptive load-frequency controller design, 1051

QFT-type design methodology for parallel plant structure, application in idle speed control, 653

Regulator
of cost, guaranteed, gain and phase margins, 1
optimal, linear, 1005
Relative order, an intrinsic property, and its application, 1045
Robust load performance, synthesis of controller structures, 1353
Robust multirate servomechanism controllers for linear delay systems using hybrid structure, 1265
Robust stability bound estimates for discrete systems, analysis and comparison, 297
Robust stability in linear state-space models with structured time-varying uncertainties, 435
Robust stabilization problems, system order reduction, 223

Sampled-data adaptive control of a class of continuous nonlinear systems, 569
Self-tuning controller, Dahlin minimum variance, 747
Servomechanism controllers, robust multirate-type, for linear delay systems using hybrid structure, 1265
Siemens's hydraulic governor, Maxwell's treatment, 861
SISO systems under bounded state feedback, pole mobility and minimal norm stabilization, 1137
Sliding mode and feedback linearizing control of a variable reluctance motor, 543
Smith dead time compensator, auto-tuner, 117
Smoothing and filtering problems solution for uncertain-stochastic linear dynamic systems, 413
Stability analysis of the equilibrium of a constrained mechanical system, 733
Stability margin–phase margin relationship for multivariable systems, 1283
Stability of nonlinar systems, Lie algebras, 315
Stability robustness bound estimates of discrete systems, analysis and comparison, 297
Stability robustness in linear state-space models with structured time-varying uncertainties, 435
Stabilization
of SISO system minimal norm under bounded state feedback, 1137
robust, system order reduction, 223
simultaneous, optimal, of linear single-input systems via linear state feedback control, 483
State models of linear time-variant discrete-time systems, 1247
State observation by on-line minimization, 595
State-space modelled systems' individual channel design structure, 71
State-space models, linear, with structured time-varying uncertainties, stability robustness, 435
Structural block diagonal decoupling problem, transfer-matrix approach, 1383

Time-delayed control of classically damped structural systems, 687
Time-variant discrete-time systems, linear, state models, 1247
Time-varying discrete systems, H_∞-control with state feedback, 451
Trajectory following, open-loop, distributed system inversion, 671
Transfer function matrix and its Laurent expansion for generalized two-dimensional systems, computation, 521
Transfer matrices having multiple quadratic poles, algorithm for computing the matrix partial fraction expansion, 1393
Transfer matrix approach to the structural block diagonal decoupling problem, 1383
Tuning, automatic, of phase-lead and phase-lag compensators, 631
Two-dimensional systems, generalized, transfer function matrix and Laurent expansion, computation, 521

Unstable first-order plus time delay systems, design of P and PI controllers, 137
Unstable nonlinear systems, normalized coprime factorizations and balancing, 1193

Vehicle speed control, matching principle illustration with inputs restricted in magnitude and rate of change, 395

Walsh functions for the off-line identification of nonlinear plants and their control, 1121
